

Position: Senior Analyst, Financial Climate Risk

Four Twenty Seven, an award-winning climate risk analytics and market intelligence firm, is looking for a talented Senior Analyst to support our research and products related to the impacts of climate change on corporations and financial markets. The position is targeted for graduates from MBA, M.Sc. Economics, or Master of Public Affairs possessing outstanding analytical and writing skills and a sophisticated understanding of financial markets, macroeconomics and corporate strategy.

Responsibilities

The Senior Analyst will collaborate with a dynamic team of climate scientists, policy analysts, and data engineers and be primarily responsible for developing and publishing original analysis on the economic impacts of climate change on corporations and financial markets. Leveraging Four Twenty Seven's proprietary data and models, the analyst will produce short and long reports including case studies on specific markets, corporations, industries, or regions. Working in close collaboration with the rest of the team, the Senior Analyst will also contribute to consulting assignments involving thought-leadership on climate risk disclosures, corporate resilience, and climate adaptation. The Senior Analyst may also contribute to strategic missions for the Executive Team on new product development or marketing.

We are looking for a talented candidate who is a good long-term fit for our team, and there is opportunity for a rapid growth career path in economic research related to evaluating the physical risks of climate and weather on financial markets.

Required Qualifications

- MBA, M.Sc. Economics, or Master of Public Affairs or equivalent.
- Outstanding analytical and writing skills
- Talented communicator, able to write clearly about complex, technical topics
- Strong quantitative analysis and econometrics skills, loves finding new insights from large data sets
- Comfortable editing other people's work, high standards for publishing
- Strategic thinker, open-minded and curious
- Very organized and detail-oriented
- Flexible, dynamic, self-starter who will enjoy working in a fast-paced environment with tight deadlines
- Sophisticated understanding of business operations and corporate governance
- Sophisticated understanding of financial markets, especially equity and FI
- Sophisticated understanding of macroeconomics and the interplay between public policy and business
- Interest and some background knowledge in climate change and/or environmental sciences

Preferred Qualifications

- Experience with financial data series and applications (Bloomberg, Eikon or Factset)
- Experience with software languages (Python, MATLAB, R, or Stata, etc.) for statistical analysis
- Experience with visualization and mapping tools (Tableau)
- Experience editing / publishing reports
- Fluent French

About Four Twenty Seven, Inc.

Four Twenty Seven (www.427mt.com) is an award-winning, climate risk analytics and market intelligence firm that brings climate intelligence to business decision-makers. Four Twenty Seven helps business leaders and investors understand how climate change will impact their assets, price climate change risk in economic decisions, and invest in resilience.
